## GM Series Servo Gearmotor

The GM provides an integrated solution. The one piece gearmotor design reduces the need for multiple seals, bearings, and couplings. The resulting package is smaller, quieter and runs cooler than a gearhead/motor as separate components. The GM series is available in a wide range of models. This allowed the customer to standardized on a single supplier for all their axes, resulting in an overall cost reduction.

The GM Series is available for quick delivery.
